Quick Facts

1 Quick Facts

General	
Vision Standard	USB3 Vision
Dynamic Range	8/10
Resolution	1920x1080
Frame Rate	143
Pixel Formats	8-Bit Monochrome 16-Bit Monochrome
Optical Interface	
IR-Cut filter	No
Sensor Type	Sony IMX290LLR-C
Shutter Type	Rolling
Sensor Format	1/2.8 inch
Pixel Size	2.9 µm
Lens Mount	C/CS
Electrical Interface	
Interface	USB 3.1gen1
Supply voltage	4.75 VDC to 5.25 VDC
Current consumption	approx 260 mA @ 5 VDC
Mechanical Data	
Dimensions	H: 36 mm, W: 36 mm, L: 25 mm
Mass	70 g
Adjustments	
Shutter	20 µs to 30 s
Gain	0 dB to 72 dB

Quick Facts

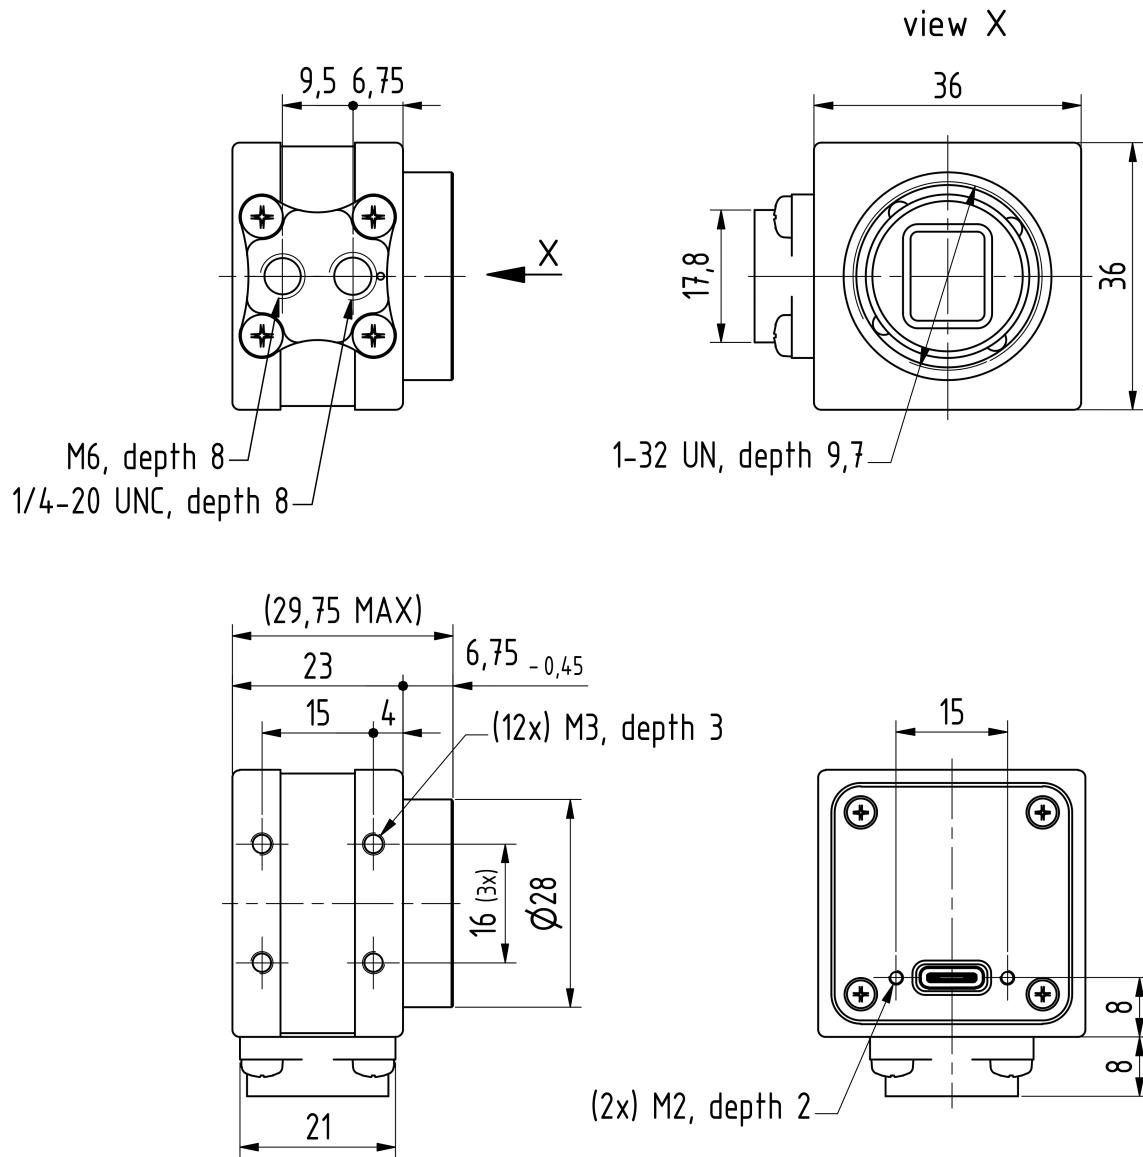

Environmental	
Temperature (operating)	-5 °C to 45 °C
Temperature (storage)	-20 °C to 60 °C
Humidity (operating)	20 % to 80 % (non-condensing)
Humidity (storage)	20 % to 95 % (non-condensing)

4 Camera Controls

This section describes the parameters available for the DMK 37AUX290 camera.

The actual name of the parameter depends on the driver technology used to access the camera. Parameter names are listed for the three most common ways to access the cameras:

- *USB3 Vision* (cross platform, via 3rd party driver)
- UVC/V4L2 (on Linux, via uvcvideo)
- *IC Imaging Control* (on Windows, via *Device Driver for The Imaging Source USB Cameras*)

4.1 Sensor Readout Control

4.1.1 Pixel Format

The pixel format defines the data type of the pixels transmitted to the computer. The bits per pixel needed for a particular pixel format influence the required bandwidth.

The way the pixel format is controlled varies significantly among the driver technology used to access the camera:

- When using *USB3 Vision*, the pixel format is controlled through the `PixelFormat` `GenCam` feature.
- When using the *uvcvideo* driver on Linux, the pixel format is defined by `video4linux2`.
- When using *IC Imaging Control*, the pixel format is part of the video format - a parameter which combines pixel format, resolution and readout mode. For more information, refer to the *IC Imaging Control* documentation sections on `VideoFormat` and `VideoFormatDesc`.

The DMK 37AUX290 monochrome camera supports multiple pixel formats with variable bits-per-pixel settings. The names of the pixel formats and the way to select them depends on the driver used to control the camera. The following table contains a short overview of all possible formats followed by a more detailed description.

Pixel Format	Bits Per Pixel	USB3 Vision	UVC	TIS UVC Driver"
8-Bit Monochrome	8	Mono8	Y800	Y800
16-Bit Packed Monochrome	16	Mono16	Y16	Y16

4.1.1.1 8-Bit Monochrome

This format transmits data using one byte for each pixel.

USB3 Vision drivers see this pixel format as `Mono8`, while UVC drivers see it with the `FourCC Y800`.

The *Device Driver for The Imaging Source USB Cameras* offers this pixel format as the Y800 video format.

4.1.1.2 16-Bit Monochrome

The sensor of the DMK 37AUX290 camera is not capable of providing 16-bit data output. Instead, the pixel data is transmitted in the most significant bits which allows application programs to ignore the sensor-specific data type, and treat the data as if the sensor outputs 16 bits.

USB3 Vision drivers see this pixel format as Mono16, while UVC drivers see it with the FourCC Y16.

The *Device Driver for The Imaging Source USB Cameras* offers this pixel format as the Y16 video format.

4.1.2 Resolution

The DMK 37AUX290 allows the user to specify which rectangular region of the image sensor to read out during camera operation. The size of this rectangle determines the number of pixels that have to be transferred for each frame and has a significant influence on the required USB bandwidth.

Lowering the resolution also often allows the image sensor to operate at a higher frame rate. Changes in the vertical resolution have more effect on the maximum frame rate than changes in the horizontal direction.

The way the resolution is controlled varies greatly between the driver technology used to access the camera:

- When using *USB3 Vision*, the resolution is controlled through the GenICam features Width and Height.
- When using the uvcvideo on Linux, the resolution is selected from a list of fixed formats. Dynamic frame sizes are not available.
- When using *IC Imaging Control*, the resolution is part of the video format, a parameter that combines pixel format, resolution and readout mode. For more information, refer to the *IC Imaging Control* documentation sections on VideoFormat and VideoFormatDesc.

Parameter	Horizontal Resolution
Minimum	368
Maximum	1920
USB3 Vision: GenICam	Width

Parameter	Vertical Resolution
Minimum	256
Maximum	1080
USB3 Vision: GenICam	Height

4.1.3 Frame Rate

The frame rate is specified in frames per second and determines the camera's operating speed.

The way the frame rate is controlled depends greatly upon which driver technology is used to access the camera:

- When using *USB3 Vision*, the frame rate is controlled through the *GenICam* feature `AcquisitionFrameRate`.
- When using `uvcvideo` on Linux, the frame rate is selected from a list of available frame rates.
- When using IC Imaging Control, the frame rate is selected from a list of available frame rates through APIs such as `Grabber::setFPS` or `ICImagingControl.DeviceFrameRate`.

The range of available frame rates depends on other camera settings such as pixel format, resolution and readout modes.

Parameter	Frame Rate
Minimum	Depending on Pixel Format, Resolution, and Readout Mode
Maximum	Depending on Pixel Format, Resolution, and Readout Mode
USB3 Vision: GenICam	<code>AcquisitionFrameRate</code>

The following tables show the maximum frame rate for some combinations of pixel format and resolution.

8-Bit Monochrome

Width	Height	Maximum Frame Rate
1920	1080	143
640	480	313

16-Bit Monochrome

Width	Height	Maximum Frame Rate
1920	1080	64
640	480	142

4.1.4 Partial Scan Offset

If the selected resolution is smaller than the sensor size, the part of the sensor that is actually read out can be specified by the *Partial Scan Offset X* and *Partial Scan Offset Y* parameters. By default, the camera automatically positions the offsets so that the center of the sensor is used.

Parameter	Partial Scan Offset X
Minimum	0
Maximum	1552
USB3 Vision: GenICam	OffsetX
UVC	ROI_Offset_X
VCD Property	VCDID_PartialScanOffset \VCDElement_PartialScanOffsetX

Parameter	Partial Scan Offset Y
Minimum	0
Maximum	824
USB3 Vision: GenICam	OffsetY
UVC	ROI_Offset_Y
VCD Property	VCDID_PartialScanOffset \VCDElement_PartialScanOffsetY

If *Partial Scan Offset X* or *Partial Scan Offset Y* is configured to a value that would be invalid with the current setting of [Resolution](#) setting, the camera uses the maximum possible value.

Parameter	Partial Scan Auto Center
On	Automatically configure Partial Scan Offset X/Y so that the center area of the sensor is read out
True	
Off	Control Partial Scan Offset X/Y manually
False	
USB3 Vision: GenICam	OffsetAutoCenter
UVC	ROI Auto Center
VCD Property	VCDID_PartialScanOffset \VCDElement_PartialScanAutoCenter

4.1.5 Image Flipping

The DMK 37AUX290 camera allows flipping of the image data horizontally, vertically, or both. The *Flip Horizontal* and *Flip Vertical* parameters can be used to control this sensor feature.

Parameter	Flip Horizontal
True	Image data is flipped horizontally
False	Image data is not flipped horizontally
USB3 Vision: GenICam	ReverseX
UVC	Flip Horizontal
VCD Property	VCDID_FlipHorizontal\VCDElement_Value

Parameter	Flip Vertical
True	Image data is flipped vertically
False	Image data is not flipped vertically
USB3 Vision: GenICam	ReverseY
UVC	Flip Vertical
VCD Property	VCDID_FlipVertical\VCDElement_Value

4.2 Image Sensor Control

4.2.1 Exposure Time

The *Exposure Time* parameter defines the time the camera opens its (electronic) shutter when it is taking an image.

Parameter	Exposure Time
Minimum	20 µs
Maximum	30 s
Default	auto
USB3 Vision: GenICam	ExposureTime
UVC	Exposure Time (us)
VCD Property	VCDID_Exposure\VCDElement_Value

4.2.2 Gain

The *Gain* parameter defines the amplification that is applied to the image at sensor level.

Parameter	Gain
Minimum	0 dB
Maximum	72 dB
Default	auto
USB3 Vision: GenICam	Gain
UVC	Gain (db/100)
VCD Property	VCDID_Gain\VCDElement_Value

4.2.3 Black Level

The *Black Level* parameter defines the lowest possibly intensity value of the image sensor.

Parameter	Black Level
Minimum	0
Maximum	511
Default	240
USB3 Vision: GenICam	BlackLevel
UVC	Brightness
VCD Property	VCDID_Brightness\VCDElement_Value

4.3 Automatic Exposure and Gain Control

The DMK 37AUX290 camera can automatically control gain and exposure time. These automatic functions are enabled by default.

In order to optimize image parameters, a region of interest can be specified for automatic functions which enables fine-grained control over the image area for that the image parameters are optimized. A selection of pre-defined area presets is available, but the user can also specify the coordinates of a custom rectangle.

In certain situations, it is desirable to limit the range of the auto-controlled parameters. For example, one might want to avoid high gain settings in order to keep noise levels low. Other applications require limiting the maximum exposure time so that movements do not get blurred. Therefore, the ranges of the gain and exposure parameter can be limited.

If both auto exposure and auto gain are active, the camera tries to lower the gain value in order to reduce noise and improve the image quality.

4.3.1 Auto Exposure

Parameter	Auto Exposure
Continuous	Enable Auto Exposure
True	
Off	Disable Auto Exposure
False	
USB3 Vision: GenICam	ExposureAuto
UVC	Auto Shutter
VCD Property	VCDID_Exposure\VCDElement_Auto

4.3.2 Auto Gain

Parameter	Auto Gain
Continuous	Enable Auto Gain
True	
Off	Disable Auto Gain
False	
USB3 Vision: GenICam	GainAuto
UVC	Auto Gain
VCD Property	VCDID_Gain\VCDElement_Auto

4.3.3 Auto Reference Value

The *Auto Reference Value* parameter specifies the target brightness for both auto exposure and auto gain.

Parameter	Auto Reference Value
Minimum	0
Maximum	255
Default	128
USB3 Vision: GenICam	ExposureAutoReference
UVC	ExposureAutoReference
VCD Property	VCDID_Exposure\VCDElement_AutoReference

4.3.4 Highlight Reduction

Enabling *Highlight Reduction* lets the auto exposure and auto gain functions reduce overexposed areas in the output image. This feature is particularly useful when using 10/12/16-bit output images and a tone mapping algorithm in post-processing when using higher bit depths as the dark areas still contain a lot of useful information.

Parameter	Highlight Reduction
True	Try to reduce overexposed areas
False	Ignore overexposed areas and focus on matching the image brightness to the selected Auto Reference Value .
USB3 Vision: GenICam	ExposureAutoHighlightReduction
UVC	Highlight Reduction
VCD Property	VCDID_HighlightReduction\VCDElement_Value

4.3.5 Auto Exposure Limits

The *Auto Exposure Lower Limit* parameter determines the minimum possible value that can be set by the auto exposure algorithm.

Parameter	Auto Exposure Lower Limit
Minimum	20 µs
Maximum	1 s
USB3 Vision: GenICam	ExposureAutoLowerLimit
UVC	Exposure Auto Lower Limit

The *Auto Exposure Upper Limit* parameter determines the maximum possible value that can be set by the auto exposure algorithm.

Parameter	Auto Exposure Upper Limit
Minimum	20 µs
Maximum	1 s
USB3 Vision: GenICam	ExposureAutoUpperLimit
UVC	Exposure Auto Upper Limit
VCD Property	VCDID_Exposure\VCDElement_Auto.MaxValue

If the *Auto Exposure Upper Limit Auto* parameter is enabled, the value of *Auto Exposure Upper Limit* is automatically kept at the maximum possible value for the current frame rate.

Parameter	Auto Exposure Upper Limit Auto
On	Select <i>Auto Exposure Upper Limit</i> automatically
Off	Let the user control <i>Auto Exposure Upper Limit</i>
USB3 Vision: GenICam	ExposureAutoUpperLimitAuto
UVC	Exposure Auto Upper Limit Auto
VCD Property	VCDID_Exposure\VCDElement_Auto.MaxValueAuto

4.3.6 Auto Gain Limits

The *Auto Gain Lower Limit* parameter determines the minimum possible value that can be set by the auto gain algorithm.

Parameter	Auto Gain Lower Limit
Minimum	0 dB
Maximum	72 dB
USB3 Vision: GenICam	GainAutoLowerLimit
UVC	Gain Auto Lower Limit

The *Auto Gain Upper Limit* parameter determines the maximum possible value that can be set by the auto gain algorithm.

Parameter	Auto Gain Upper Limit
Minimum	0 dB
Maximum	72 dB
USB3 Vision: GenICam	GainAutoUpperLimit
UVC	Gain Auto Upper Limit

4.4 Trigger

The trigger mode can be used to take images at very specific points in time which are specified by an electrical signal connected to the TRIGGER_IN pin of the I/O connector of the camera.

4.4.1 Trigger Mode

The *Trigger Mode* parameter enables the trigger mode.

Parameter	Trigger Mode
On	Enable Trigger Mode
True	
Off	Disable Trigger Mode
False	
USB3 Vision: GenICam	TriggerMode
UVC	Trigger Mode
VCD Property	VCDID_Trigger\VCDElement_Value

4.4.2 Trigger Polarity

The *Trigger Polarity* parameter controls whether a trigger event is accepted on the rising or falling edge of the signal connected to the TRIGGER_IN line.

Parameter	Trigger Polarity
RisingEdge	Accept rising edge as trigger signal
True	
FallingEdge	Accept falling edge as trigger signal
False	
USB3 Vision: GenICam	TriggerActivation
UVC	Trigger Polarity
VCD Property	VCDID_Trigger\VCDElement_Polarity

4.4.3 Software Trigger

The *Software Trigger* function can be used to simulate a trigger pulse, in turn causing one image to be exposed and delivered to the host computer.

Parameter	Software Trigger
Execute	Simulate one trigger pulse
USB3 Vision: GenICam	TriggerSoftware
UVC	Software Trigger
VCD Property	VCDID_Trigger\VCDElement_SoftwareTrigger

4.4.4 Trigger Overlap

The *Trigger Overlap* feature gives information on when a new trigger pulse is accepted in the trigger -> exposure -> readout sequence.

Parameter	Trigger Overlap
Off	The next trigger pulse is only accepted once the previous frame has been read out from the sensor
Readout	The next trigger pulse is accepted during readout as long as the remaining readout time is shorter than the exposure time
USB3 Vision: GenICam	TriggerOverlap
VCD Property	VCDID_Trigger\VCDElement_TriggerOverlap

4.5 Trigger Timing Parameters

The 37U series camera series offers several options for dealing with bad trigger signals. By using the *Debounce Time*, *Denoise Time* and *Mask Time* parameters, the camera can be configured to ignore pulses on its TRIGGER_IN line under certain conditions.

Useful values for these parameters are application-specific. They depend on the expected trigger frequency, the exposure time and assumptions about the input signal quality.

The default values for all these parameters is 0 µs, assuming perfect signal quality.

4.5.1 Trigger Delay

The *Trigger Delay* parameter specifies a time for which the camera waits between receiving a trigger signal and starting the exposure of an image. Simulated trigger

pulses generated through the *Software Trigger* function are not delayed by this parameter.

Parameter	Trigger Delay
Minimum	0 s
Maximum	100000 µs
Default	0 s
USB3 Vision: GenICam	TriggerDelay
UVC	Trigger Delay
VCD Property	VCDID_Trigger\VCDElement_TriggerDelay

4.6 Digital I/O

The 37U series has one digital input and one digital output. The digital input can be used as a [Trigger](#) input, and its current status can be examined.

The digital output can be configured as a [Strobe](#) output to signal the exact moment when the image sensor is sensitive to light so that external light sources can be synchronized to its operation cycle.

4.6.1 General Purpose Input

The *General Purpose Input* parameter allows the current status of the TRIGGER_IN pin.

Parameter	General Purpose Input
True	TRIGGER_IN line status is low
1	
False	TRIGGER_IN line status is high
0	
USB3 Vision: GenICam	GPIIn
UVC	GPIN
VCD Property	VCDID_GPIO\VCDElement_GPIORead VCDID_GPIO\VCDElement_GPIOIn

4.6.2 General Purpose Output

The *General Purpose Output* parameter controls the status of the STROBE_OUT pin.

Parameter	General Purpose Output
True	Drive the STROBE_OUT line high
1	
False	Drive the STROBE_OUT line low
0	
USB3 Vision: GenICam	GPOut
UVC	GPIOOUT
VCD Property	VCDID_GPIO\VCDElement_GPIOWrite VCDID_GPIO\VCDElement_GPIOOut

4.7 Strobe

The strobe function controls the automatic generation of output pulses on the STROBE_OUT pin which is synchronized to the image sensor's exposure time.

4.7.1 Strobe Enable

The *Strobe Enable* parameter enables the automatic generation of strobe pulses.

Parameter	Strobe Enable
On	Strobe enabled
True	
Off	Strobe disabled
False	
USB3 Vision: GenICam	StrobeEnable
UVC	Strobe Enable
VCD Property	VCDID_Strobe\VCDElement_Value

4.7.2 Strobe Polarity

The *Strobe Polarity* parameter can be used to invert the strobe pulse output.

Parameter	Strobe Polarity
ActiveHigh	The STROBE_OUT pin is logically high during the exposure time
True	
ActiveLow	The STROBE_OUT pin is logically low during the exposure time
False	
USB3 Vision: GenICam	StrobePolarity
UVC	Strobe Polarity
VCD Property	VCDID_Strobe\VCDElement_StrobePolarity

4.7.3 Strobe Operation

The *Strobe Operation* parameter specifies how the length of the strobe pulses are controlled.

Parameter	Strobe Operation
Exposure	Output pulse duration is equal to the current exposure time
True	
FixedDuration	Output pulse duration is specified by <i>Strobe Duration</i>
False	
USB3 Vision: GenICam	StrobeOperation
UVC	Strobe Exposure
VCD Property	VCDID_Strobe\VCDElement_StrobeMode

4.7.4 Strobe Duration

The *Strobe Duration* parameter controls the length of the strobe pulses if *Strobe Operation* is set to use the fixed duration mode.

Parameter	Strobe Duration
Minimum	0 μ s
Maximum	32767 μ s
USB3 Vision: GenICam	StrobeDuration
UVC	Strobe Duration
VCD Property	VCDID_Strobe\VCDElement_StrobeDuration

4.7.5 Strobe Delay

The *Strobe Delay* parameter can be used to add a small delay between the start of exposure and the strobe output pulse.

Parameter	Strobe Delay
Minimum	0 μ s
Maximum	32767 μ s
USB3 Vision: GenICam	StrobeDelay
UVC	Strobe Delay
VCD Property	VCDID_Strobe\VCDElement_StrobeDelay

4.8 Region of Interest for Auto Functions

The 37U series cameras allow for the setting of a region of interest that is used while controlling the [Auto Exposure](#), [Auto Gain](#) and Auto White Balance functions.

4.8.1 Auto Functions ROI Enable

The *Auto Functions ROI Enable* parameter allows for the use of a region of interest for auto functions.

Parameter	Auto Functions ROI Enable
True	Auto functions only take a specified part of the image into account
False	Auto functions look at the whole image
USB3 Vision: GenICam	AutoFunctionsROIEnable
UVC	Auto Functions ROI Enable
VCD Property	VCDID_AutoRoi\VCDElement_Value

4.8.2 Auto Functions ROI Preset

The *Auto Functions ROI Preset* parameter lets the user select from a list of ROI presets.

Parameter	Auto Functions ROI Preset
Center 50%	Select a rectangular area in the center of the output image
USB3 Vision: GenICam	AutoFunctionsROIPreset
UVC	Auto Functions ROI Preset
VCD Property	VCDID_AutoRoi\VCDElement_AutoRoiPreset
