Camera Interface

High-speed quad port PCIe frame grabber for CoaXPress

CoaXPress (CXP) is an asymmetric high speed point to point serial communication standard for the transmission of video and still images, scalable over single or multiple coaxial cables. It has a high speed downlink of up to 6.25Gbps per cable for video, images and data, plus a lower speed, 20Mbps uplink for communications and control. Power is also available over the cable ("Power-over-Coax") and cable lengths of greater than 100m may be achieved [www.coaxpress.com].

The new frame grabber series microEnable 5 supports the so-called next-generation interfaces. With its PCIe eight lanes interface and double frequency support (Gen 2), a bandwidth of up to 3,6 GBytes/sec is supported to transfer the image data to the host RAM.

microEnable 5 AQ8-CXP6B is an advanced frame grabber for one single high speed CoaXPress camera or up to four single channel ones. The board supports state of the art features like "Power-over-CoaXPress", Gen<i>Cam, long cable length and many more, and combines high bandwidth performance with easy-to-install system setups - over a single cable.

Combined with SIlicon Software's runtime environment (current version 5.2), CoaXPress camera and framegrabber bundles benefit from the ease of software handling, powerful acquisition and pre-processing features, and a comprehensive SDK environment.

#### **CoaXPress Interface Features**

- High data rates with up to 6.25Gbps over a single coax cable and up to 25Gbps using four cables
- Long cable lengths in excess of 100m (without any hubs, repeaters etc.)
- Real time behavior through fixed, low latency with precise triggering capability
- Supports 1D and 2D shading correction with offset and gain settings, and hot pixels correction (interpolation)
- Flexible and reliable through use of standard coax, e.g. RG59 & RG6
- Ease of integration of video, communication, control and power over a single coax cable
- Hot pluggable
  - ... and further ones

#### **Additional Features**

- Lookup Table
- Basic Image Enhancement & Processing
- Reads Gen<i>Cam Configuration
- Dig I/O Signals
  - ... and further ones

#### **Software Products**

- **Device Drivers**
- Firmware Flasher
- microDisplay
- microDiagnostics
- Gen<i>Cam Explorer
- microEnable SDK
